

a

Cohort flow and analytic endpoints

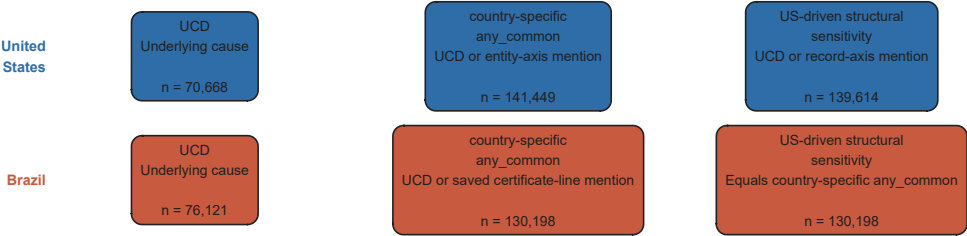

Counts are resident analytic records; endpoint branches are not mutually exclusive.

b

Released representations compared within each system

Parallel definitions only: not ordered or nested; any_common is country specific and not semantically equivalent across systems.

c

National-source validation boundaries

Green: exact coverage; amber: definition or scope retained; red: unsupported cross-system inference.

UCD K80-K83	UCD exact 2018-2024	UCD and all-cause exact 2012-2024	Country-specific representations only
US-driven structural sensitivity	Record-axis alternative exact 2018-2024	Definition equals any_common	Not a common endpoint
country-specific any_common	Entity-axis any_common not externally validated	Certificate-line mention not externally validated	No semantic equivalence test
	United States NCHS / CDC WONDER	Brazil SIM / TabNet	Cross-system interpretation
